The Network that adds value in the Italian Road and Rail Equipment sector

The Value of the **Network**

AstepON is a company based in Arezzo, Italy, founded in 2019 and led by **Giorgio Mannelli**, which deals with **technical-commercial development**, marketing, integrated procurement in the field of **Road and Rail Equipment**, as well as program management in the infrastructure sector, with the aim of generating widespread quality and multiplying **market opportunities**.

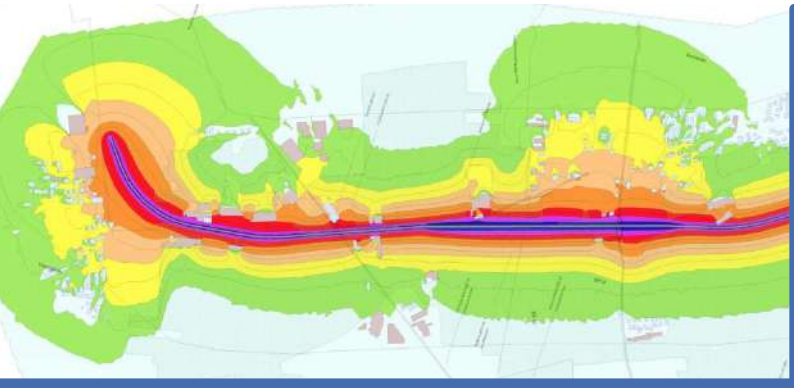

AstepON works in synergy with a network of main partners united by a vision oriented towards **innovation** and **quality**. In addition, it relies on a network of collaborators who contribute to set it as a point of reference - for designers, authorities and companies - in the process that starts from the design concept and, through the tender phases, arrives at the construction site.

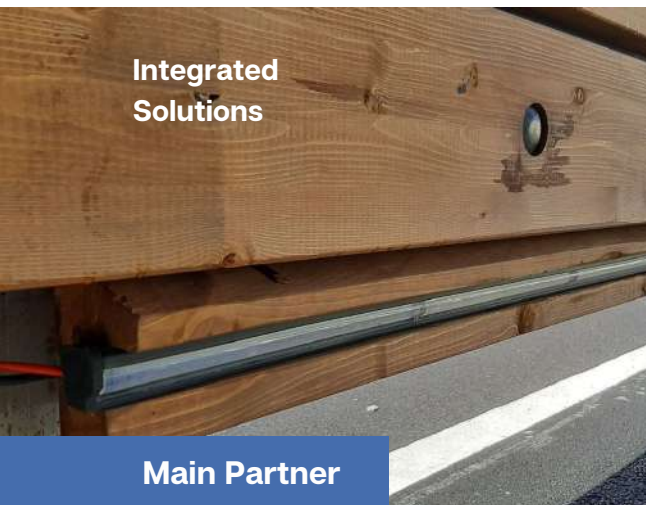

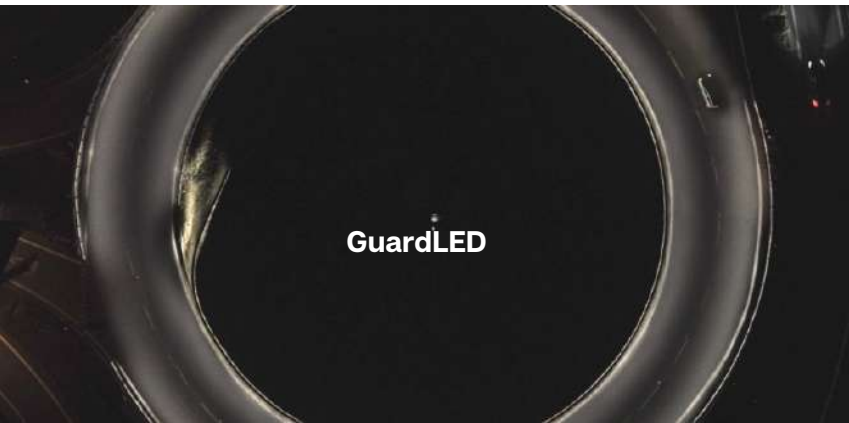

The competence of **AstepON** comes from afar, to be precise from the sector of **noise protection** in the industrial and infrastructural field, growing since the nineties.

A laboratory of **technological evolution** and **environmental sustainability**, which is transversal to the road and railway worlds. Its teachings, today, have already brought **excellent results**: both in the acoustic mitigation itself (intensified activities with always brand new projects), and in other **Road & Rail** contexts: from road safety to construction site management, from lighting to smart roads, to innovative materials.

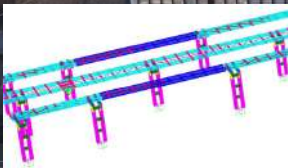

The goal is to renew infrastructure by leveraging the logic of the **network** and the integration of **know-how**.

Unique or integrated innovations, capable of transforming **roads and railways** - as well as **construction sites** - into ever safer, life long, eco-sustainable places in harmony, functional and aesthetic, with all the connected contexts. This is the goal of the numerous technological solutions developed and proposed by **AstepON** and its **network**: from **noise barriers** in the latest generation materials to **safety equipment** for mobility and construction sites, from smart and clean lighting to complete metal carpentry works, to the systems for structural reinforcement.

Anti-Noise Tunnels

Carpentry for Infrastructure

Anti-Noise Barriers

Dynamic Railings

Joints Monitoring Systems

Road and Railway Joints

Groundsleeve Reinforcement

Draco Smart Washer

FRP Composite Materials

Electric Cabins

Emergency Led

Tender Marketing

The **AstepON** Tender Marketing portal, accessible from www.astepon.it, is the ideal source of information for designers, authorities, companies and infrastructure specialists looking for innovative **Road & Rail Equipment** solutions for new projects and technical proposals in tender process according to the recent Italian legislation.

Tender Marketing is a digital meeting point providing technical data sheets and useful links concerning products developed by **AstepON** main partners and other providers (**Desami**, **MDS**, **Optimares**, **Safety Products**, etc.).

Infrastructure

Simplify the complexities in every phase of the life cycle of an infrastructural work. This is one of the priority objectives of **AstepON**, which, with its staff of specialists, represents a competent and reliable partner in the tender steps - through the scouting of tailor-made and highly innovative solutions - but also in the project management activities and **technical coordination of the construction process**.

The typical network approach, already consolidated in the technical-commercial field, thus returns in another capacity also in all the processes following the deal.

The tool, in this case, is **AstepON project management**. Its purpose: to shorten the distances between operators and, in fact, to simplify any complexity.

Finally, the tool that allows being in touch with operators, in which **AstepON** firmly believes, is a conference aimed at disseminating **good practices** and **constructive networking**. In this regard, **AstepON** is a co-organizer, together with the main partner **Vita International**, of the annual **VisioneSicurezza** event, dedicated to innovation in the road infrastructure sector.
